About the Hasting Centre

Founded in 1969, The Hastings Center is one of the world's preeminent research institutions in bioethics. We help frame and examine critical bioethics issues facing professional practice and public policy. Our researchers include a staff of leading bioethics scholars and a worldwide network of experts. Most of our work is organized into five broad areas: Children and Families; Aging, Chronic Conditions, and the End of Life; Health and Health Care; Science and the Self, and Humans and Nature. At the heart of many of our projects are interdisciplinary working group meetings in which Hastings Center research scholars lead outside scholars, professionals, advocates, and other interested parties in careful analysis and sustained debate. The Hastings Center is distinctive in bioethics for its status as an independent institution. Our methodology and products are the gold standard for rigorous interdisciplinary investigation of critical issues in bioethics. Project findings are published in books, special reports in the *Hastings Center Report*, and other leading peer-reviewed journals. Further impact is achieved through our engagement with the press, policy-makers, and the public. The Hastings Center has a long history of nurturing bioethics outside of the U.S., including current collaborations in Hong Kong and Singapore and through our Visiting Scholar Program, which provides opportunities to academics and professionals from all parts of the world.

Biography of Dr. Nancy Berlinger

Nancy Berlinger's research focuses on ethical challenges in health care work, and on related areas of professional education, organizational policy, and public policy in the United States and internationally. Her special interests include societal challenges arising from population aging and age-related chronic illness; treatment decision-making and care for seriously ill people and near the end of life; health care access and social integration for migrant populations; and the ethics of managing safety and harm in health care systems. Her research projects include a collaboration with the (US) Society of Hospital Medicine and the American Association of Critical-Care Nurses (AACN), which has created a new primary palliative care process and practice standard for frontline hospital clinicians to improve communication about serious illness. With colleagues at the National University of Singapore, The Ethox Centre of the University of Oxford, and The Hastings Center, she has co-developed the *Singapore Bioethics Casebook* as a professional and public education tool for Singapore's ageing society. She co-directs The Hastings Center's Undocumented Patients project, which maintains a web-based knowledge hub used by clinicians, scholars, students, journalists, and policymakers and has developed policy recommendations for improved city-level solutions in New York City.

Her current and recent public service includes the bioethics committee of the White House Office of Science and Technology Policy Initiative on Cancer Diagnostics in Sub-Saharan Africa (2015 – present), the ActionHealthNYC Community Advisory Panel, City of New York (2016 – 2017), and the Care and Coverage Subgroup of the New York City Mayor's Task Force on Immigrant Health Access (2014 – 2015). She also serves on the Bioethics Committee at Montefiore Medical Center (Bronx, NY) and teaches an interdisciplinary course on "Migration" at Lehman College, City University of New York. She is the author, co-author, or co-editor of four books:

N Berlinger, *Are Workarounds Ethical? Managing Moral Problems in Health Care Systems* (Oxford University Press, 2016)

N Berlinger, B Jennings, and SM Wolf, *The Hastings Center Guidelines for Decisions on Life-Sustaining Treatment and Care Near the End of Life: Revised and Expanded Second Edition* (Oxford, 2013; Japanese translation, 2016) Related articles: SM Wolf, N Berlinger, and B Jennings, "40 Years of Work on End-of-Life Care – From Patients' Rights to Systemic Reform," *NEJM* 372; 7.
